MONTHLY WEATHER MAP
METEOROLOGICAL SERVICE, DOMINION OF CANADA
JUNE 1935

TEMPERATURE

Along the north coast of British Columbia and in the northern interior the mean temperature for June was generally one or two degress below normal. On Vancouver Island and in the southern interior valleys temperatures were normal to one degree above. In the extreme southeastern corner of the province mean temperatures were normal to two degrees below normal.

In the Calgary, Edmonton, and foothill regions in Alberta the temperatures were normal to three degrees below. The southeastern corner of the province was normal to two degrees below normal. In the central eastern section temperatures were generally normal but with local exceptions where there were excesses of one to three degrees.

In the Athabaska River valley mean temperatures were two to three degrees below normal. In the Peace River district temperatures ranged from normal in the south to two degrees below normal in the north.

Mean temperatures in Saskatchewan south of the Scott-Saskatoon line generally ranged from normal to three degrees below with the exception of the Cypress Hills, where there was an excess of one to two degrees. Along the narrow belt extending through Prince Albert and Battleford temperatures were normal to one degree above. In the Churchill River section mean temperatures ranged from one degree above normal to two degrees below.

Throughout the entire province of Manitoba there were deficiencies of two to five degrees.

Mean temperatures were generally below normal in northern Ontario. The district of Kenora reported deficiencies of three to four degrees. Thunder Bay and Algoma districts reported general deficiency of four degrees except at Port Arthur where the deficiency was only one degree. In the Temiskaming, Sudbury, and Manitoulin districts the mean temperature was generally about one degree below normal. Exceptions were the Ruel and Montreal River sections where the deficiency was three to five degrees.

South of Lake Nipissing and the Ottawa River to the Lower Lakes mean temperatures varied from one degree above normal to four degrees below normal. The greatest deficiencies occurred in the Lake St. Clair Counties and along the ridge between Lakes Huron and Ontario to the Rideau Lakes. In a narrow belt along the shore of Lake Ontario mean temperatures were one degree above normal.

In Quebec along the upper and middle St. Lawrence and in the extreme southwestern corner of the province mean temperatures were normal to three degrees in excess. Along the Upper Ottawa and in the upper Laurentian Hills temperatures were generally normal to one degree below. In the Lake St. John region mean temperatures ranged from a deficiency of one degree to excess of three degrees. Along the Lower St. Lawrence River and the north shore of the Gulf there were excesses of three to seven degrees.

In New Brunswick temperatures averaged normal to three degrees above normal. In Nova Scotia temperatures were generally two to three degrees above normal. The only exception was the Atlantic Seaboard where the mean temperature was normal to one degree above. In Prince Edward Island temperatures averaged three degrees above normal while on Sable Island there was a deficiency of two degrees.

In Southern Newfoundland temperatures averaged normal to three degrees above normal while at Fogo the mean was five degrees in excess of normal.

In Hudson Strait the month was one degree warmer than a normal June while on the west coast of Hudson Bay the mean temperature ranged from two degrees below normal at Churchill to two degrees above normal at Chesterfield.

PRECIPITATION

Rainfall in the southern interior valleys, on Vancouver Island, and along the Pacific Coast of British Columbia was generally less than the normal amount by ten to fifty per cent. In the interior plateau region the rainfall ranged from normal in the south to twice the normal amount in the northern part. In the northern passes of the Selkirks there was an excess of twenty-five to seventy-five per cent.

In the section of Alberta south of the Bow River rainfall was thirty to eighty per cent. below the normal amount but averaged about fifty per cent. below for the district as a whole. In eastern Alberta between the Bow and the north Saskatchewan Rivers the amount was ten to fifty per cent. below normal. In the western portion of the Grain Belt of Alberta between Calgary and Edmonton and in the foothill region there was an excess of ten to one hundred per cent., averaging generally about forty per cent. In the Peace and Athabaska River districts there were excesses of twenty to ninety per cent.

In southwestern Saskatchewan south of the Outlook-Kerrobert line there was a deficiency of rainfall which ranged locally from ten to seventy-five per cent. and averaged thirty per cent. for the district. Along a narrow belt from Saskatoon to Macklin rainfall varied locally from five to sixty-five per cent. in excess of the normal amount. In eastern Saskatchewan from Prince Albert south through Regina to the U.S. boundary rainfall for June was well above the normal amount. The excess ranged from fifty to two hundred per cent. West of Prince Albert and north of the North Saskatchewan River there was a deficiency of ten to fifty per cent.

The whole agricultural region of Manitoba experienced extremely heavy rainfall. Here the total rainfall was one and a half to three times the normal amount. The only exception was extreme southeastern Manitoba east of the Red River where there was a deficiency of about fifteen per cent.

Rainfall in Ontario was generally above normal with the exception of the Kenora and Thunder Bay districts where the deficiency was five to twenty-five per cent. with local exceptions. In Algoma, Temiskaming, Sudbury, and Manitoulin districts the excess varied locally from five to ninety per cent. and was generally about sixty per cent. In the Upper Ottawa valley and the Nipissing districts rainfall was nearly twice the normal amount. In the Lake Huron and Georgian Bay counties the excess varied locally from ten to one hundred per cent. Along the shore of Lake Erie in Essex, Kent and Elgin Counties there were deficiencies of five to twenty per cent. In the interior counties of the southwest and in the Niagara Peninsula there were excesses of five to ninety per cent. In southeastern Ontario in the Upper St. Lawrence and Lower Ottawa valleys there were excesses of thirty to one hundred per cent. or more.

In Quebec along the Ottawa and Upper St. Lawrence there were local variations of five to one hundred per cent. excess. In the extreme southwestern counties as well as along the Middle and Lower St. Lawrence there were excesses of ten to sixty per cent. In the Upper Laurentian Hills and in the region of Lake St. John excess ranged from ten to one hundred per cent. Apparently there was a large excess over normal precipitation on the north shore of the Gulf.

Northeastern New Brunswick had rainfall only slightly less than the normal amount. The rainfall of western and southern sections of the province was fifteen to sixty-five per cent. above normal. In western Nova Scotia except in the interior valleys there was excess of ten to seventy-five per cent. From Halifax eastward there was a deficiency ranging locally from five to thirty per cent. In Prince Edward Island Charlottetown reported ten per cent. excess.

Along the south coast of Newfoundland rainfall was forty-five to one hundred and twenty-five per cent. in excess of the normal amount for June. On the east coast rainfall varied from normal to fifty per cent. below normal.

A. J. CONNOR

SPECIAL REPORTS

NOTE—Column H is Highest Temperature; Column L is Lowest Temperature; Column P is Precipitation in inches; Column I denotes total of bright sunshine in hours during the month; Column Tm is the mean temperature of the current month.
